

THE CANADIAN SHIELD REGION

By Brody, Conor, Dominik and Jaden

LANDFORMS

The Canadian shield's landforms are so cool! There are mountains such as the Torngat mountains in Labrador and the Laurentian mountains in Quebec.

There are also 3.96 billion year old rocks!

CLIMATE

The Canadian shield region has many types of weather. It has brief but sometimes heavy spring showers. Snow falls heavily in parts of Manitoba. There is less snow in the south even though they have longer winters. It is usually around +25 degrees in the summer And it is usually -18 degrees in the winter.

ANIMALS

Muskrats are hunted heavily in the shield region. Bison live in parks. And cattle and sheep are livestock! Pigs are meat sources. And that's some animals from the Canadian shield region!

VEGETATION

Did you know that the national flower in the Canadian shield region is the purple saxifrage? The soils of Portage le prairie are rich for growing crops and raising livestock! They also have many beets and mushrooms.

FUN FACTS

The Canadian shield region is the largest region in all of Canada!

The landscape is mostly made up of grass, bog, rocky in the mountain region few trees in the far north.
