

Interior plains

By Abdullah ,Kirsten ,Chloe, Zoha, Ansh

Landforms

- The area of the three Prairie Provinces lies just in the center of North America continent.
- Its area of 652,330 square km (251,885)square miles.
- The area of the three Prairie Provinces is 652,330 square km.

Climate

- The climate in the interior plains, the average temperature in January is an icy -18°C to -28°C .
- In July it only reaches up to 54°C .
- Temperatures are warmer and winters are shorter in the south.

Animals

- There is so many animals in the interior plains that I can not pick what one I like most. There is ,squirls, mice, pelecins, cattle, wolfs, minks, bulls, swans, buffalo, that's only a little bit of the animals I love.

Vegetation

- The Interior Plains has lots of vegetation. It has golden wheat, rich black soil, trees, and grass. The vegetation in the Interior Plains has golden wheat and open farming fields. Some of the vegetation is wheat, trees, and rich black soil. The Interior Plains also have tall prairie grass and grasslands. It has plains with few trees and big open fields. And those are some are the vegetation that is in the Interior Plains.

Natural Resources

- Sod is the hard top layer soil on the prairies.
- Other crops grown in Manitoba are barley, oats, flax, and canola, also called rapeseed.

Body's of water

- Today I'm going to talk to you about body's of water did you know that lake Agassiz it is located in North America province of Manitoba. A glacial lake is formed when a glacier erodes land and then melts filling the hole or space created. Red river is located in united states it is a part of mississippi river. lake Winnipeg has an area of 24514 km
